

Student Researcher Guide

Created by –

Wealth, Miriam, Gabriel and Junainah

What does a student researcher do (role)?

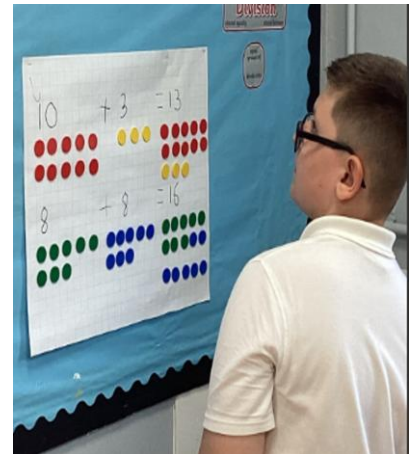

- Student researchers choose a topic and gather evidence by collecting information.
- They ask lots of different questions about their chosen topics.
- Student researchers have to research about their topics before going to collect data.
- You can use surveys to collect a baseline.
- They then discuss their findings, with their team.
- Finally, student researchers present their findings.

A good student researcher must (skills)...

Student researchers must have the following traits:

- Courage
- Responsible
- Respectful
- Patient
- Approachable
- Understanding
- Formal
- Hardworking
- Resilient
- Preserver

Being a student researcher (feelings)...

Enthusiastic

Nervous

Curious

Unsure

Motivated

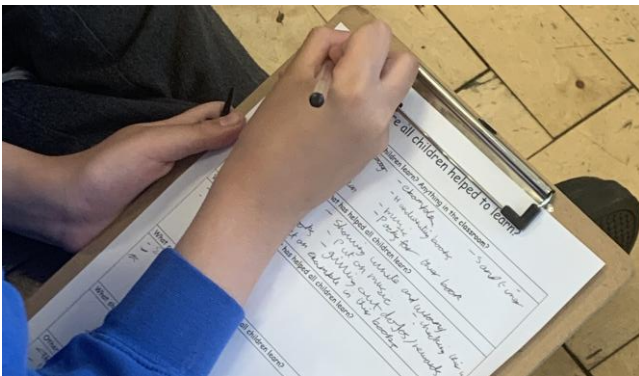

Focused

Proud

Jolly

Frustrated

Hopeful

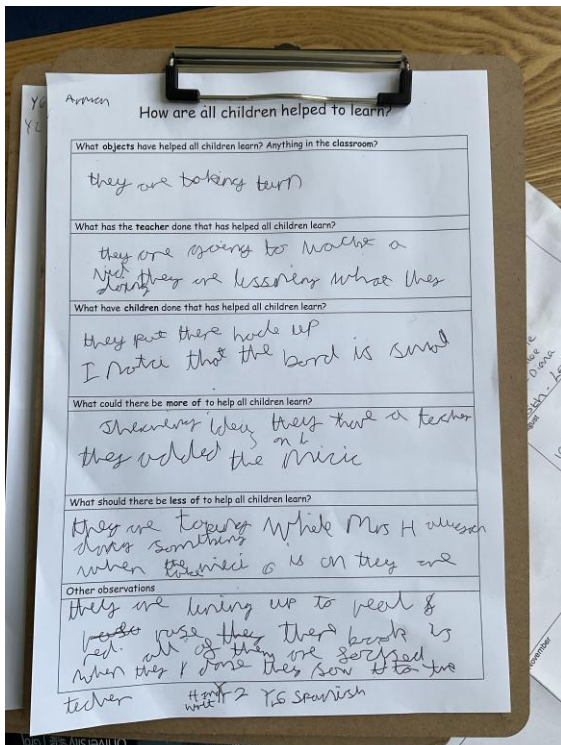

During your time as a student researcher, there will always be times where you experience different emotions, but when your research has ended, you will feel proud of what you have accomplished!

What have you learnt?

For yourselves

- We learnt to always feel proud once we have finished something.
- We have learnt a couple of different ways of collecting data.
- We learnt how to investigate and research.

For your schools

- For Maths, we learnt how to use different resources to help break down our learning.
- We now know concrete resources can help all ability groups.
