

Student Researcher Guide

Created by –
Josh, Arman, Emilly and Grace

What does a student researcher do (role)?

To see different opinions of children about a subject.

We observe lessons to see what they learn about.

We discussed what we have seen and what children have told us.

A good student researcher must (skills)..

Listen to ideas and take notes.

Ask questions and see what they think can improve lessons.

Support ideas and ask to improve their response.

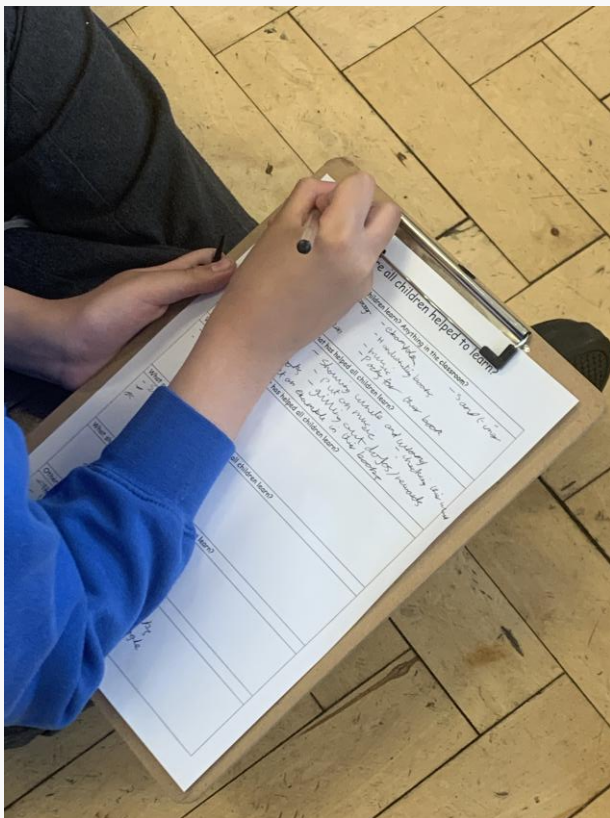

Be quiet and respectful during other people's lessons.

Being a student researcher (feelings) ...

We feel proud and confident and excited because it is something new to do and it will help schools improve within the subject they choose.

Stressful because there is a lot to do.

What have you learnt? For yourselves and for your schools

We learn about interests of children and the different ways they can learn and what they believe could be better.
